DETAILED ACTION

Allowable Subject Matter

1. Claims 1-30 are allowed.

The following is a statement of reasons for allowance:

As for independent claims 1, 11 and 21, they recite a method, computer program and data processing system for compensating for fundamental frequency changes and artifacts and reduce sensitivity to pitch information in a frame-based speech processing system. Prior art such a Lowry show similar methods and systems but does not specifically teach the method and system wherein it filters a frame of a first signal to obtain a residual signal frame and a set vocal tract model parameters, *wherein the frame of the first speech signal and the residual signal frame contain a same fixed numbers of samples*, to result in a non-linear form of time-scale stretching and to construct a pitch adjusted speech signal that can be more easily understood by speech recognition software. Although Lowry teaches the use of an analysis frame that is a fixed length, a fixed length analysis frame is not the same thing as the frame of a first speech signal and a residual signal frame containing a same fixed number of samples. Besides, Lowry teaches overlapping windows at least two per pitch period, which is $\frac{1}{2}$ or less, which is not an integer (column 3, lines 25-35).

Dependent claims 2-10, 12-20 and 22-30 are allowed because they further limit their parent claims.
